- High Safety Required Use -

   This Product is designed, developed and manufactured as contemplated for
general use, including without limitation, general office use, personal use,
household use, and ordinary industrial use, but is NOT designed, developed and
manufactured as contemplated for use accompanying fatal risks or dangers that,
unless extremely high safety is secured, could lead directly to death, personal
injury, severe physical damage or other loss (hereinafter "High Safety Required
Use"), including without limitation, nuclear reaction control in nuclear
facility, aircraft flight control, air traffic control, mass transport control,
medical life support system, missile launch control in weapon system.

   If user does not perform secure measures required in assuring High Safety
Required Use, user shall NOT use this software. PFU Limited and related companies
accept no claims from customers and third parties in relation to, and accept
no responsibility for any losses incurred as a result of, the use of this software
for High Safety Required Use.

1. Cautions for Installation
============================

  * The following languages are supported for Rack2-Filer.
      English, French, German, Italian, Spanish, Russian, Portuguese,
      Chinese(simplified), Chinese(traditional), Korean, Japanese

  * This product is designed to work on following operating systems.
      Microsoft(R) Windows(R) 2000 Professional (Service Pack 4 or higher)
      Microsoft(R) Windows(R) XP Professional (32-bit version only)
      Microsoft(R) Windows(R) XP Home Edition
      Microsoft(R) Windows Vista(R) Home Basic (32-bit and 64-bit versions)
      Microsoft(R) Windows Vista(R) Home Premium (32-bit and 64-bit versions)
      Microsoft(R) Windows Vista(R) Business (32-bit and 64-bit versions)
      Microsoft(R) Windows Vista(R) Enterprise (32-bit and 64-bit versions)
      Microsoft(R) Windows Vista(R) Ultimate (32-bit and 64-bit versions)
      Microsoft(R) Windows(R) 7 Home Premium (32-bit and 64-bit versions)
      Microsoft(R) Windows(R) 7 Professional (32-bit and 64-bit versions)
      Microsoft(R) Windows(R) 7 Enterprise (32-bit and 64-bit versions)
      Microsoft(R) Windows(R) 7 Ultimate (32-bit and 64-bit versions)

  * To install this product, please login as Administrator or a member of
    Administrators Group (or as a user having administrative right).

  * Before beginning the installation, end all applications and turn off
    any virus software.

2. Cautions for Removal
=======================

  * To uninstall Rack2-Filer, log in as the user who installed
    Rack2-Filer. Administrators privilege is required for the user.

  * Exit all applications and antivirus software before uninstalling
    Rack2-Filer.

3. Changes in the Service Pack
==============================

 V5.0L40 is the same as V5.0L30 or V5.0L31 which have Service Pack 1
 applied. The main contents changes are as follows.

  * Now supported for Microsoft(R) Windows(R) 7.

  * Now supported for ScanSnap S1300.

* All set LibRoot folders are displayed in the folder view and binders
    in the LibRoot folders can be moved or duplicated.

  * Increased the number of sheets that can be managed in the WorkArea
    at one time for functions such as file import or marked text crop,
    from 500 to 1000.

  * Fixed the problem that when searching a binder, the keyword
    information was not correctly searched for.

  * Fixed the problem that when scanning multiple business cards with a
    flatbed scanner, the business cards scanned first were imported to
    Rack2-Viewer multiple times.

  * Fixed the problem that pages after the second page could not
    be viewed when exporting a password protected binder with
    "Rack2 Binder with embedded Viewer (*.exe)", and then opening it
    without Rack2-Viewer being installed.

  * Corrected the problem that when a sheet smaller than A4 size was
    imported to Rack2-Viewer, it was zoomed in when displayed.

  * Corrected the problem that import was not possible when a binder
    containing sticky notes that was created with a version of
    Rack2-Filer prior to V5.0, was specified as the Target Binder of
    Rack2 Folder Monitor Software or the binder to which data is sent
    from another application.

  * Corrected the problem that in a library with multiple cabinets with
    long names, changing the background operations failed, and cabinet
    deletion was not possible.

  * Some of other minor problems have been corrected or improved.

V5.0L31 is the same as V5.0L30 which have Update Pack 2 applied.
The main contents changes are as follows.

  * Corrected the following problems that occur only with Microsoft(R) Windows(R) 7.
    - Corrected the problem that when "Color" is set in the Preferences for
      Raku2 ImageWriter, and a document is printed from Rack2-Viewer or the WorkArea,
      the colors are sometimes inverted.

    - Corrected the problem that when a Standard user logs on, files cannot be
      inserted to Rack2-Viewer or imported to the WorkArea.

    - Corrected the problem that when the left and right pages of an open
      binder are contents pages, there is a delayed response when the edge of
      a page is clicked.

  * Corrected the issue of an error occurring when the first item in the contents
    list is moved to an even numbered page in the contents list using the
    "Paste Contents" operation.

  * Corrected the issue of excessive time delay between the time when the [Scanner]
    button in the Rack2-Viewer window is clicked and when the scan actually starts
    (or TWAIN driver window appears) during document scanning using a FUJITSU fi series
    scanner with TWAIN driver.

4. Cautions for Use
   ===================

  * When setting a link folder in the network folder and sharing the data,
    the font specified as the binder title may not be displayed correctly
    if the client computer does not have the required font.

  * If the characters on the screen for Windows are set to be zoomed in,
    some of the Rack2-Filer screens may not be shown correctly with
    the resolution other than 1024 x 768. In this situation, set the
    size of the characters to the standard setting.

  * Do not log off or shutdown while an operation is being processed in the WorkArea.

  * Environment dependant characters (unicode) are not supported.
    Do not use environment dependant characters (unicode) for the installation
    folder, user names, folder names, and other string variables.

  * Rack2-Filer may not operate correctly under virtual environments
    such as remote desktop.

  * PDF files created with ScanSnap on a Mac OS cannot be used as

"ScanSnap imported data" in Rack2-Filer. For this reason, functions
for "ScanSnap imported data", such as "Crop marked section" and
"Output to Office", cannot be used with imported pages of these types
of PDF files.
