

PaperStream Central Admin change history

Version 1.3.1

New features:

1. SP-2230N/SP-2240N is now supported.
2. fi-8040 DirectScan email sending settings now support the following options:
 - Authentication : Exchange Online OAuth 2.0 authentication
 - Encryption : STARTTLS

Note: Please use fi-8040 firmware version "0H00" or later.

Corrected issue:

1. Minor bugs have been fixed.

Version 1.2.0

New feature:

1. OAuth 2.0 authentication is now available for sending emails via Exchange Online.
For more details, please refer to the following URL.
<https://www.pfu.ricoh.com/global/scanners/topics/news20250617/index.html>

Corrected issue:

2. We have fixed an issue where installation would fail when the product was installed on certain language versions of Windows OS.

Version 1.1.1

Corrected issues:

1. Help files are now displayed in the following languages.
 - French, German, Spanish, Italian, Russian, Portuguese, Simplified Chinese, Traditional Chinese, Korean, Turkish, and Arabic.
2. Fixed the problem where, while Gate Console is enabled, changing the update name on the leader side did not change the update name on the follower side.

3. Fixed the problem where, while Gate Console is enabled, the leader was unable to use the [Error To Lift] button to clear an error for the scanners or computers managed by the followers.
4. Fixed the problem where, when a scanner/computer group was assigned to multiple updates, deleting one of the updates caused the group to no longer be targeted by the remaining updates.
5. Fixed other minor problems.

Version 1.1.0

Improvements:

1. Enhanced update application functionality
 - Multiple updates can now be applied to the same scanner group or computer group at the same time.
 - You can now specify the order in which the above multiple updates are applied.
 - * If you are using Scanner Central Admin Server via Gate Console, please update PaperStream Central Admin Server Option to 1.1.0 along with PaperStream Central Admin.
2. During Gate Console operation, duplicate registrations that occur when the same scanner or computer is linked to a leader, follower, or another follower can be selected and deleted.

Corrected issues:

1. Fixed a problem in which information was not displayed when opening the "Event List" screen from the "Scanner" screen for a scanner managed by a Scanner Central Admin Server follower in a leader during Gate Console operation.
2. Fixed a problem in which followers would not connect to the Gate Console during Gate Console operation, even after changing the gate console setting to "Do not use" in the leader and then "Use it as a leader" again.
3. Fixed a bug in Scanner Central Admin Server 5.5 that caused application updates to fail when the application and database were installed on separate computers and the SQL Server instance name was changed during database updates.

4. Fixed a problem in which, when creating an update for a group of scanners, if "Download the latest version" was specified for the firmware and the following models were included in the applicable group, the download failed and the update could not be created.
fi-8190/fi-8290/fi-8170/fi-8270/fi-8150/fi-8250/fi-8150U/fi-8250U
5. Fixed a problem that caused module creation to fail when creating a user application using the Module Creator included with PaperStream Central Admin.
6. Fixed a problem with uploading update modules to PaperStream Central Admin that caused the upload to fail if the module file size exceeded 1 GB.
7. Fixed a problem where the status of Scanner Central Admin Server follower did not change in the [Follower List] on the [Gate Console] screen.
8. Fixed other minor problems.

Version 1.0.0

New features:

1. The product name has been changed from Scanner Central Admin Desktop to PaperStream Central Admin.
The product version is reset to 1.0.0 due to the renewal of the product name.
2. fi-7280, fi-7260, fi-7180, fi-7160, fi-7030, fi-65F are now supported.
3. The following scanners can now work directly with PaperStream Central Admin.
- fi-7300NX, fi-8190, fi-8290, fi-8170, fi-8270, fi-8150, fi-8250
4. Gate Console functionality has been added.
- Up to 51,000 scanners can be managed by consolidating scanners managed by other PaperStream Central Admin and Scanner Central Admin Server into a single PaperStream Central Admin.
5. Added login function.
Now able to log in with a local account or an account linked to LDAP server.
6. Added the ability to notify the administrator of scanner errors via e-mail.

7. SNMP agent functionality has been added.
SNMP v1/v2c/v3 is available.
8. The PaperStream Central Admin administration screen can now be viewed in a browser of any computer.

Scanner Central Admin Desktop change history

Content of change from 1.2.1 to 1.3.0

- **New features:**
